

TRANSPORTER DYNAMIC NEO

The Transporter Dynamic Neo™ is a critical care transfer trolley designed for the road transfer of neonates. Crash tested in accordance with BS EN 1789 and independently witnessed, the Transporter Dynamic Neo™ offers a safe and accredited method of road transfer.

Developed through 40 years of collaboration with customers and medical specialists, the Transporter Dynamic Neo™ achieves the optimal medical equipment configuration.

KEY BENEFITS:

-  Optimal equipment configuration
-  Easy to manoeuvre
-  Safe and secure
-  Minimise vibration
-  Crash-tested BS EN 1789
-  Compatible with two-part ambulance floor locks*

FEATURES:

- 1 Framework**
Constructed from lightweight, high-strength aluminium, engineered to the highest quality standards and available in half and full framework options.

- 2 NEW Adaptive Lock - compatible with two-part ambulance floor locks** **PATENT PENDING**
Secures and locks the Transporter Dynamic Neo™ into a road ambulance, reducing movement.

- 3 Directional Lock**
Prevents wheels from rotating, improving overall control and safety when unloading from an ambulance.

- 4 Anti-static Castor Wheels**
360° rotation, with foot brake. Robust, but soft enough to reduce vibration.

INCUBATOR COMPATIBILITY:

- ✓ International Biomedical Airborne Voyager
- ✓ International Biomedical Airborne Aviator
- ✓ International Biomedical Airborne 750i
- ✓ International Biomedical Airborne 185A+
- ✓ Draeger TI500
- ✓ Atom V808 (half rail option only)
- ✓ Atom IncuArch

DISCLAIMER

*The Transporter Dynamic Neo™ has been tested and certified to BS EN 1789 and we recommend is used in conjunction with ambulance floor locks, that are certified to a minimum of 300kg.

Various equipment configurations available.
